

RiverPro OB3.3 VTEC Activation Step

(August 24, 2004)

RiverPro

Defining VTEC Products

1. From the Riverpro Settings menu, select Modify Product Sections option.
2. Choose the sections you wish to include in the product, and the order you wish the sections to appear.
3. For each section to be included, click the Section button.
4. Select the template you wish to be used for that section.
5. Click OK to exit the section window.
6. From the right side of the Product Settings window, identify the product as a Segmented product.
7. Choose to segment by forecast point.
8. Identify the product to include VTEC.
9. Identify the mode. For the VTEC OT&E, the mode should be X.
10. Choose the VTEC phenomena (most likely Flooding (FL)).
11. Modify the product expiration time.
12. Choose whether to use ZONE or COUNTY codes in the VTEC segment.
13. Choose the default significance for the product (W for both FLW and FLS).
14. Apply all changes and close the Modify Product Sections window.
15. From the Settings menu, select the Save to Product Settings option
16. Define the new product with a new filename, 10 character product id (this id will be the same as for the non-VTEC FLW/FLS, respectively), sequence number, and description. Note: you may want to identify this product as a VTEC product in the description so that staff may easily differentiate VTEC products from non-VTEC products.
